

Sexually transmitted diseases

Sexually transmitted diseases (STDs) are, as their name would suggest, transmitted during sexual intercourse (vaginal, oral or anal). These diseases affect women more often than men. Men, however, are more often asymptomatic virus carriers of such diseases.

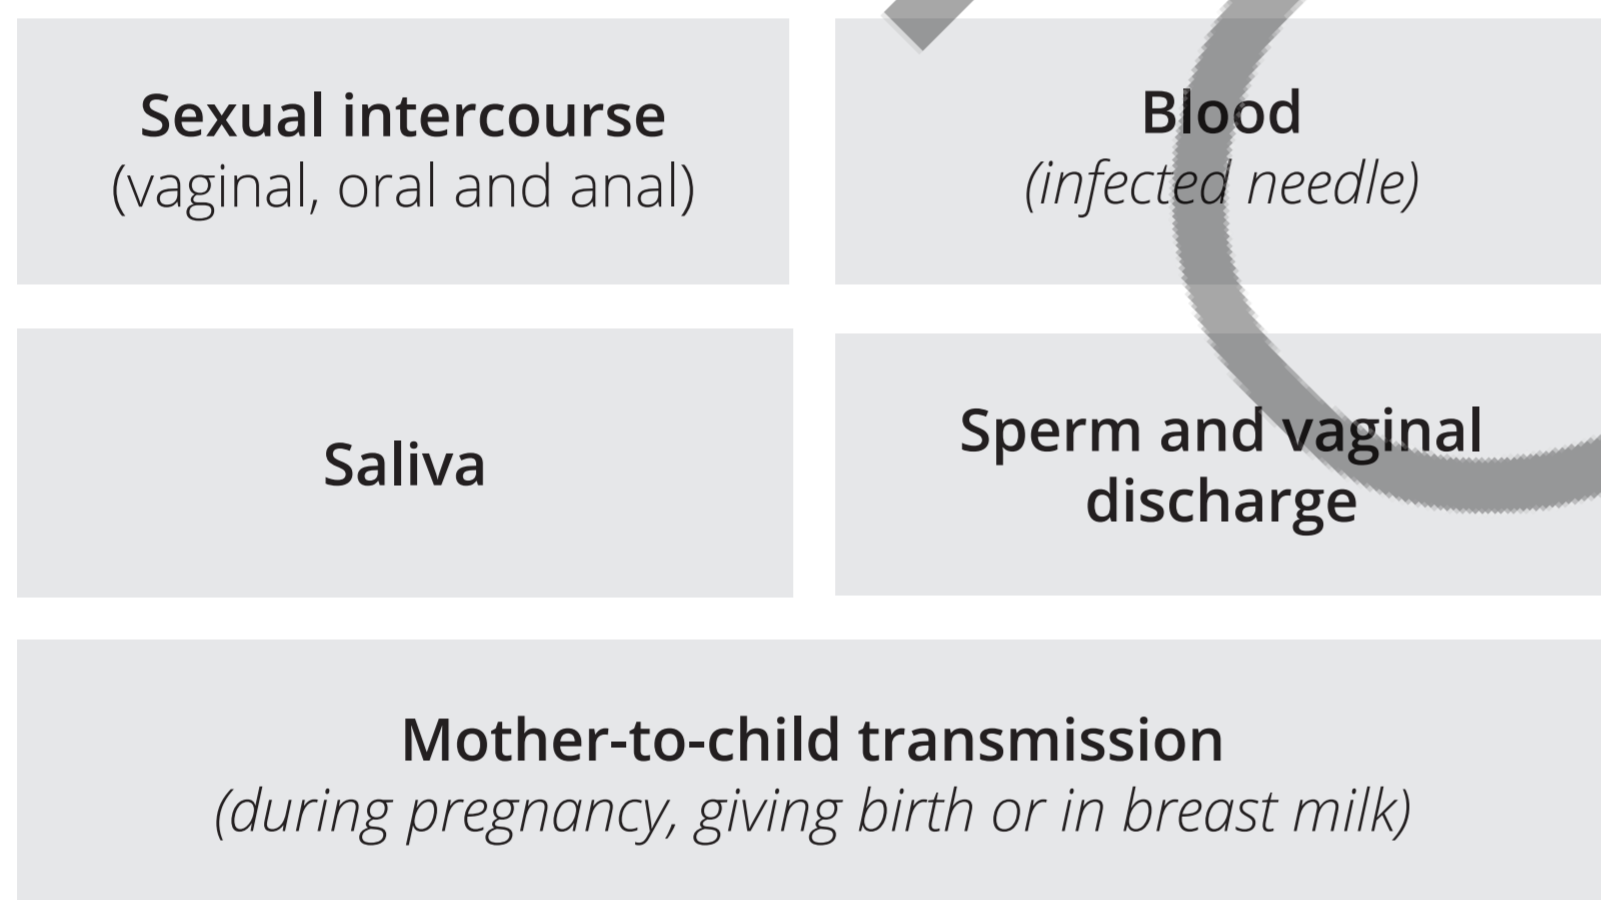

Most common STDs

- 1 HPV*
- 2 Chlamydia
- 3 Gonorrhea
- 4 Syphilis
- 5 HIV**
- 6 Hepatitis B and C

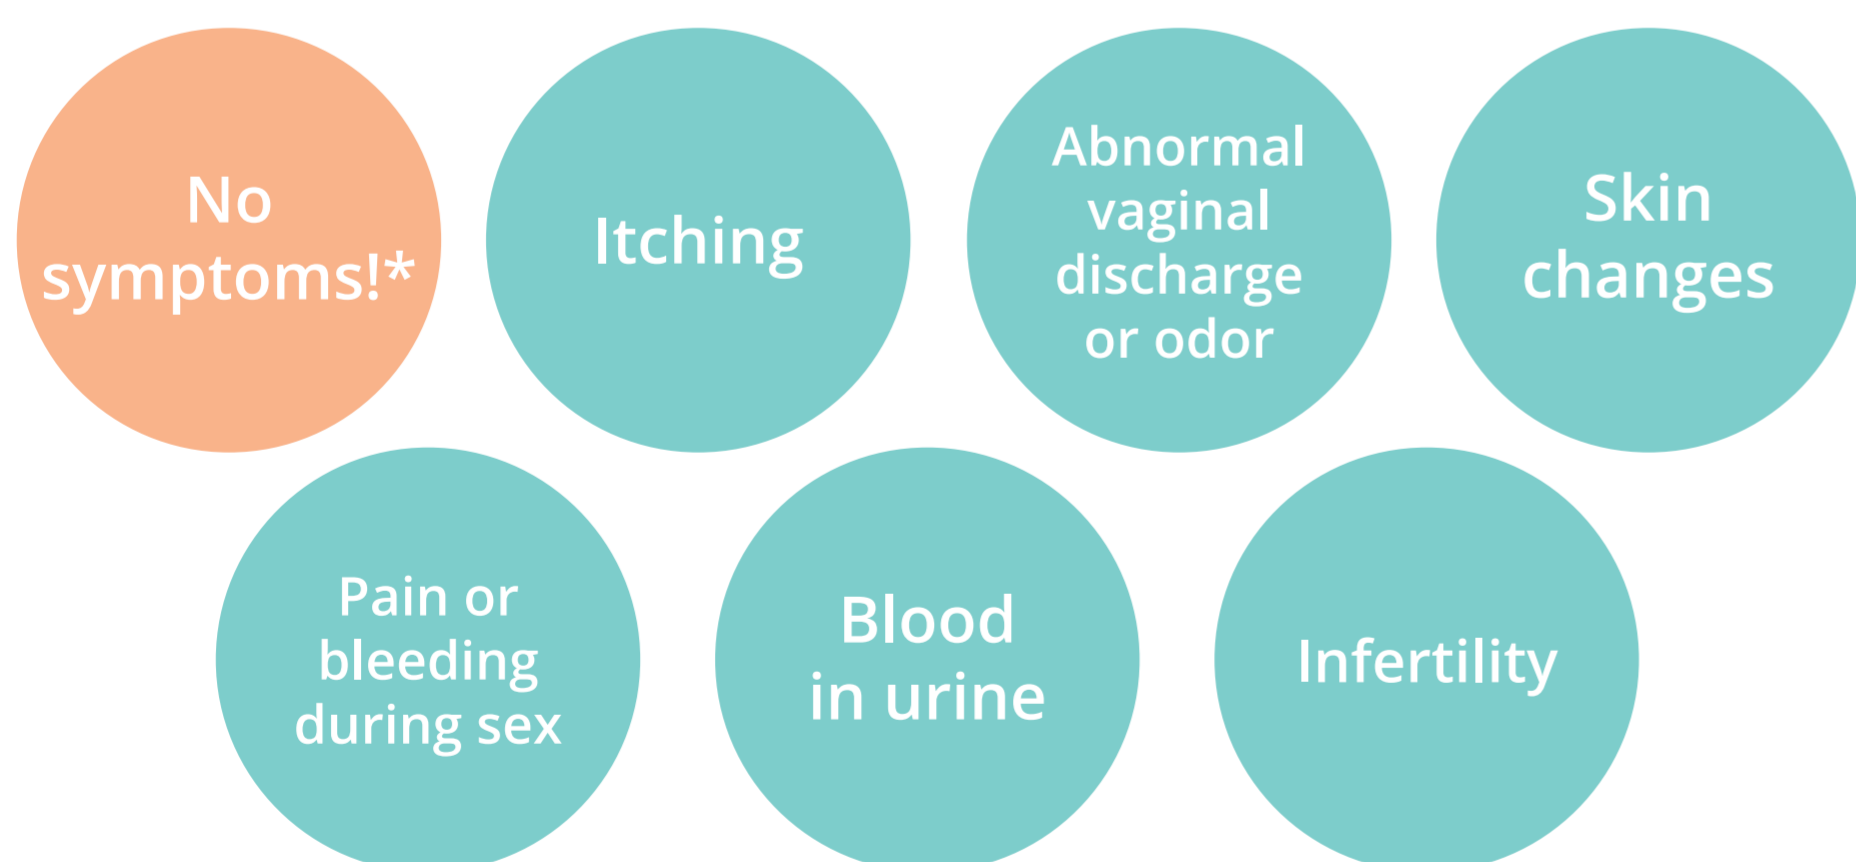

*HPV = Human Papilloma Virus

**HIV is a virus causing AIDS (Acquired Immune Deficiency Syndrome), which is a disease. AIDS is a late stage of HIV infection; however, if someone is HIV positive, it doesn't have to mean he/she has AIDS yet.

How are STDs transmitted?

How do STDs manifest themselves?

*Don't forget to get tested regularly!

How to prevent STDs?

Use a condom

Get vaccinated against HPV infection

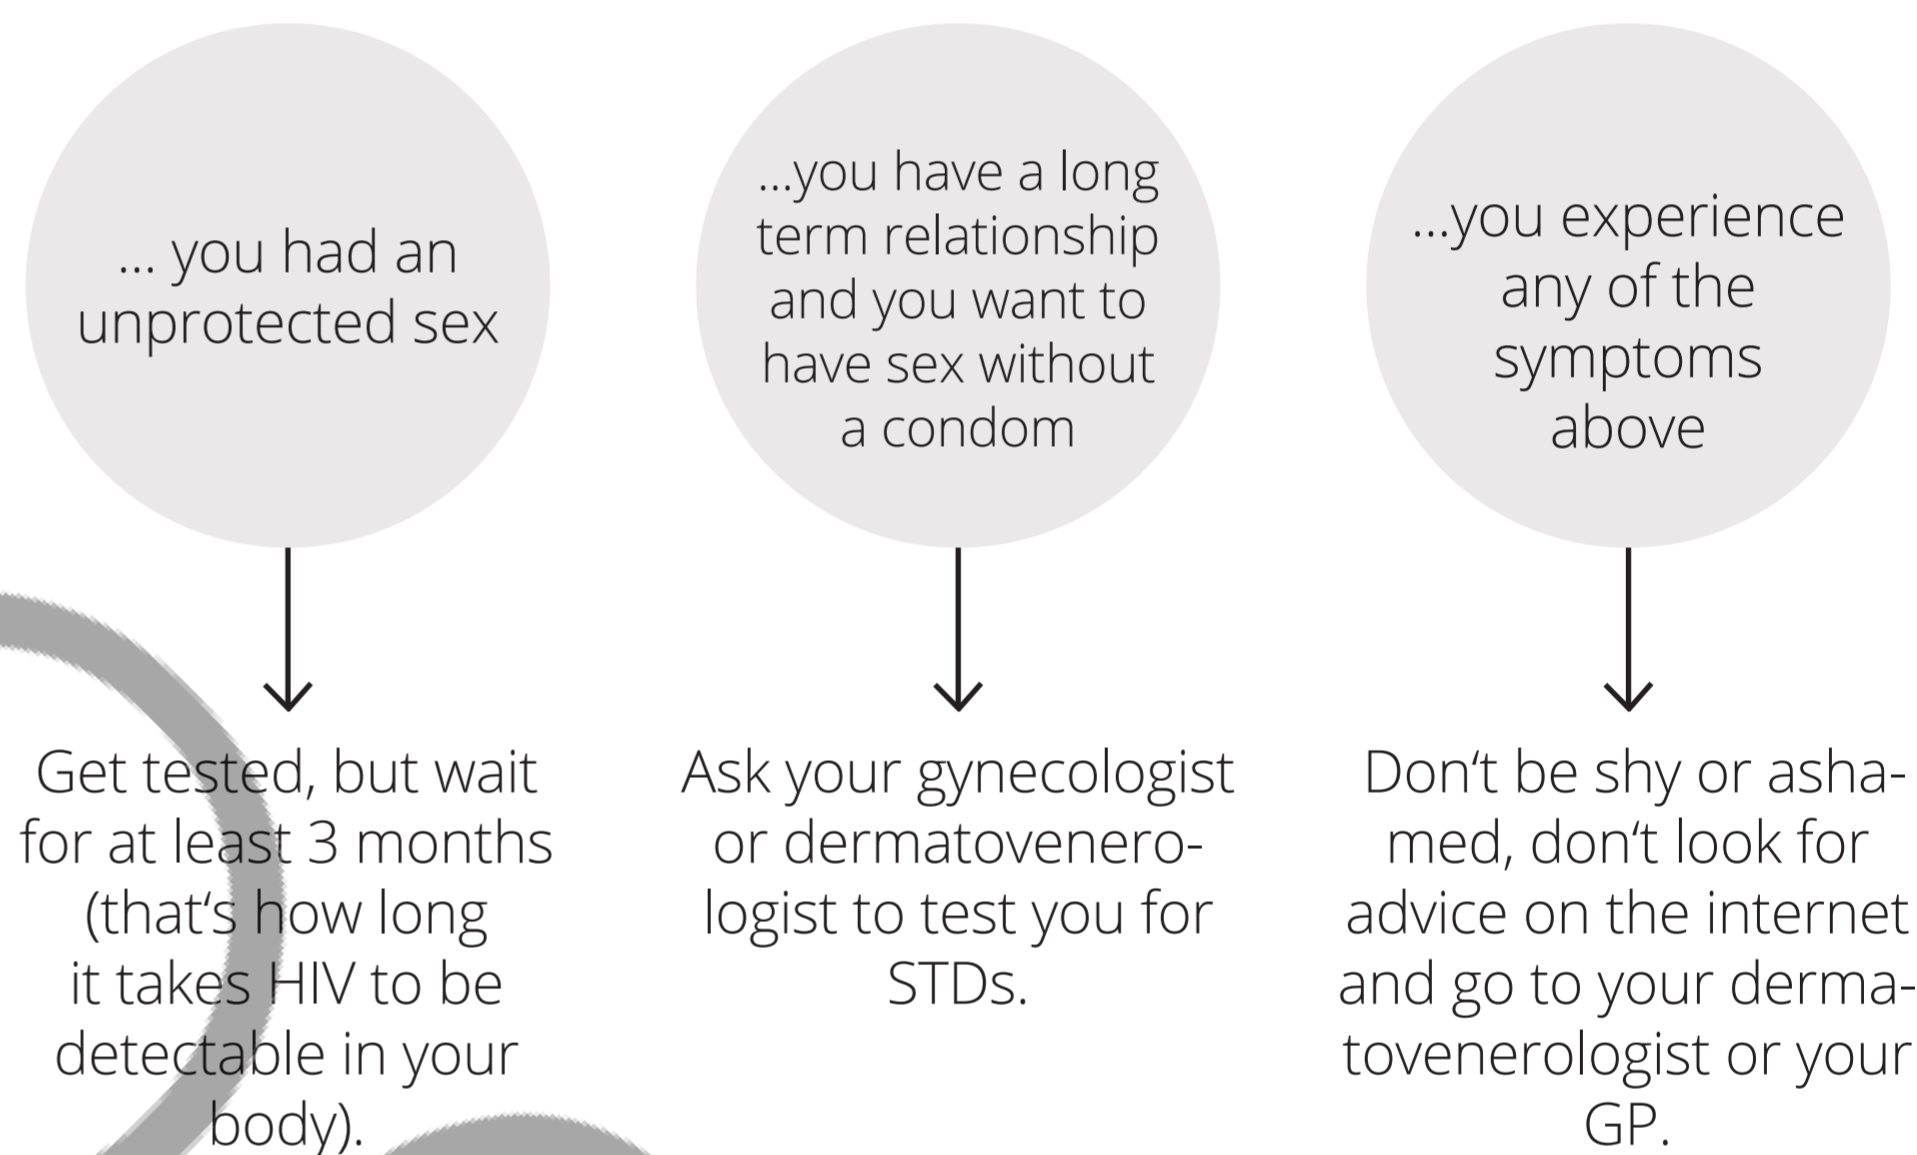

Get regularly tested with your partner

Maintain appropriate intimate hygiene (use intimate soap, wear breathable underwear)

Where to get tested when...

IMPORTANT:

If you are diagnosed with any of the STDs, inform all your past and present sexual partners - they need to get tested and treated as well!

The map of STD test centers can be found here:

Point your smartphone camera.

How much does it cost?

If you had unprotected sex or if you experience any of the symptoms, the test is **free**. If you want to get tested "just in case", it costs about 500 CZK.
